Join National Grid distribution engineer Caleb George for a demonstration of the Rhode Island System Data Portal.

You are invited to an online demonstration of the Rhode Island System Data Portal. The Rhode Island System Data Portal is an online, interactive mapping system created for developers to gain real-time static visibility to the electric grid distribution system. The portal contains distribution feeder and substation information, including feeder characteristics such as geographic locations, voltage, feeder ID, planning area and substation source, as well as loading and available distribution generation hosting capacity.

This webinar will contain an update regarding National Grid creating a new FAQ tab and the NWA tab revision.

Caleb will give a tour of the Portal and help attendees understand how to leverage the information for future development projects. The webinar will also provide an update on recent additions to the Portal, including a new hosting capacity map. Following the overview, Project Engineer Caleb George will have ample time for Q&A.

There is no charge to participate in this webinar. This event requires [registration and space is limited](#).

If you have problems with registration or need additional assistance, please contact us at webinars@questline.com.
